

FINANANCIAL

LITERACY

Follow Jamal, his friends and family as they learn new financial capability skills and explore how to manage their money.

Financial Education has never been more important and how children interact with money and finance is an essential life skill. According to recent research backed by Lowell:

‘The introduction of financial education on the national curriculum in 2014 in secondary schools in England has not translated into all pupils receiving adequate financial education; two-thirds of teachers believe that students leave school with a poor level of financial understanding

As the internet has become an established part of life for children from an early age, with nearly all children between 5-15 going online in 2020, the report found that the lack of financial knowledge among children is posing unprecedented risks. For those aged 8-11, digital spending within online marketplaces and mobile games has hit record highs and according to the National Audit Office as many as 55,000 children aged 11-16 were found to be ‘problem gamblers’, with an additional 85,000 at risk.’ (Lowell Business)

This is a great resource to stimulate thinking and discussion on a wide range of topics from What is Inflation? to exploring Digital Currencies, Entrepreneurship and Managing Money Skills.
